DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Taniguchi et al. (US 6,100,910).

With respect to claim 1 Taniguchi discloses a heater apparatus of an ink-jet print head comprising:

- a substrate (Fig. 1, element 1);
- a wire/resistance heat emitting body pattern (Fig. 1, element 3) on the substrate and including an electric conductor layer (Fig. 1, elements 5 and 6);
- a plurality of wires (Fig. 1 and Fig. 2, element 3A) in the wire/resistance heat emitting body pattern;
- a plurality of resistance heat emitting bodies (Fig. 1 and Fig. 2, element 3B) to heat ink in the wire/resistance heat emitting body pattern; and
- a protective layer (Fig. 1, element 7) formed on the wire/resistance heat emitting body pattern to protect the wire/resistance heat emitting body pattern,

wherein the wires have a first dopant doped therein by an ion implantation process carried out to regulate an electric resistance of the wires after forming the wire/resistance heat emitting body pattern over the substrate (Column 5, lines 3-16).

Art Unit: 2853

With respect to claim 2, Taniguchi discloses the first dopant comprises an ionizable dopant (Column 5, lines 3-16, i.e. adding the impurity boron).

Response to Arguments

Applicant's arguments with respect to claims 1 and 2 have been considered but are moot in view of the new ground(s) of rejection.
